E

AN

YOUR REQUEST

Calculate impedance for each measurement and create a chart of impedance vs frequency.

measurements.xlsx

measurement_01

You can leave this page. We'll notify you when the result is ready.

Working on it...

Step 3 of 4 · Running securely

DONE

Preparing data

Read 42 rows and 3 columns from measurement_01.

DONE

Generating analysis

Wrote the calculation $Z = U / I$ and a log-log chart.

IN PROGRESS

Running securely

Calculating impedance for each measurement in an isolated sandbox.

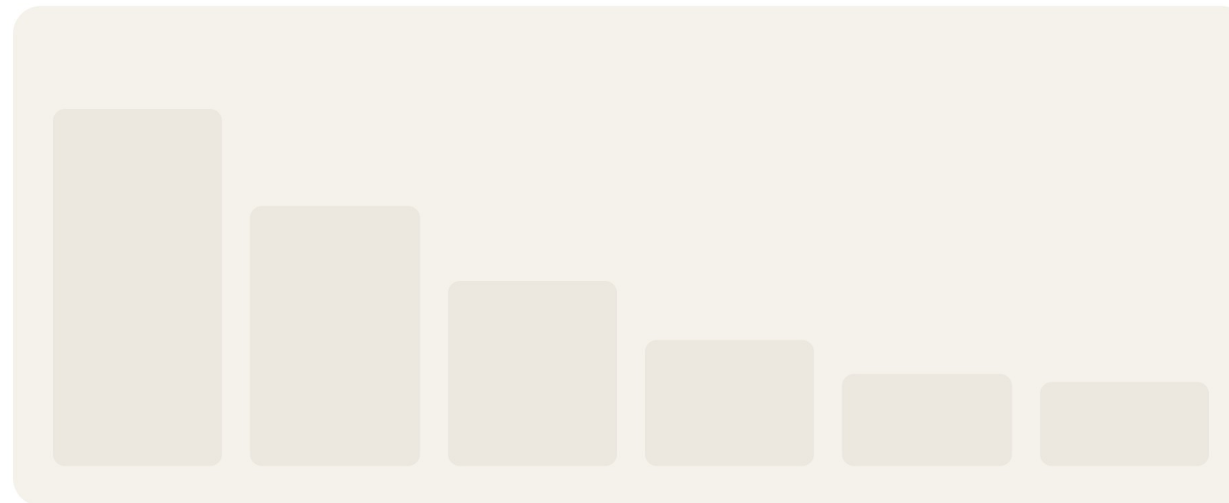

NEXT

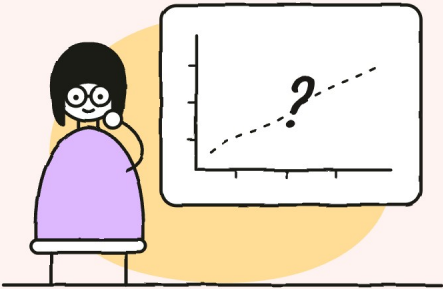

Creating results

Building the table and chart, then saving provenance.

RESULT PREVIEW · appears here

data points will enter one by one...

Analysis could not be completed.

Nothing was changed in your data or document.

POSSIBLE REASON

Column 'voltage' contains text values.

Row 33 reads "n/a". A number is needed to calculate $Z = U / I$.

Inspect data

Edit request

Run again

Quick fixes

Pick one and run again. Your original data stays untouched.

Ignore row 33
Skip the row and calculate the other 41.

Treat "n/a" as missing
Keep the row, leave Z empty for it.

Fix the cell in the source
Open measurements.xlsx and re-upload.

What happened

- Preparing data
- Generating analysis
- Running securely — stopped at row 33
- Creating results — not reached

Technical details are kept for support and never shown here.

Where it happened · measurement_01

1 cell

#	frequency (Hz)	voltage (V)	current (mA)
31	100	2.00	1.25
32	85	2.00	1.07
33	70	n/a	0.88
34	60	2.00	0.75
35	50	2.00	0.63
